HTML Assignment – Tech Gadget Launch Page

- Objective
    - Create a single HTML file named **gadget_launch.html** to showcase a new tech gadget of your choice.
    - The gadget can be anything, such as a smartwatch, drone, gaming console, or even a product you invent yourself.
    - Use **only plain HTML**. *No CSS or JavaScript.*

- **Requirements**
    - Include proper HTML boilerplate: <!DOCTYPE html>, <html>, <head>, <title>, and <body>.
    - Add at least **two HTML comments** describing different sections of the page.
    - Use multiple headings (<h1>, <h2> or <h3>) and descriptive paragraphs to explain your gadget.
    - Apply text formatting: **bold**, *italic*, <u>underline</u>, and <del> (for showing an old price).
    - Insert **horizontal rule (<hr>)** and **line breaks (<br>)** where appropriate.
    - Add **one link** (to a relevant tech site).
    - Insert at least **one image** with alt text and width/height attributes.
    - Create **one ordered list** (with a type attribute) and **one unordered list** (with a type attribute), including at least one <li value="">.
    - Build a **table** with a header row and at least three data rows comparing gadget models or features.
    - Maintain neat indentation and provide a meaningful <title> for the page.

- Submission
    - Name your PDF as (name_rollno_branch_section) eg: (xyz_01_AIML_D)
    - **In the PDF, there should be your whole code and screenshots of the outputs.**
    - Upload this file on github (all HTML file, images) and copy the URL and paste it on the google form and add a ReadMe file.
